Curtiss-Wright Awarded $4.25M Contract for U.S. Army Program

Award for Support of Future Combat Systems

ROSELAND, N.J., July 30, 2008 /PRNewswire-FirstCall via COMTEX News Network/ -- Curtiss-Wright Corporation (NYSE: CW) today announced it was chosen for the development and demonstration phase of the U.S. Army's Future Combat Systems' (FCS) Integrated Computer System (ICS) program. Under terms of the contract with General Dynamics C4 Systems and Rockwell Collins, Inc., Curtiss-Wright will supply its Gigabit Ethernet Switch Module (GESM) to meet the performance and reliability needs of the FCS, a family of advanced, networked air- and ground-based military systems for use by the U.S. Army's future forces.

"Curtiss-Wright is proud to supply our advanced open-standards based networking products for the U.S. Army's FCS/ICS program," said Martin R. Benante, Chairman and Chief Executive Officer of Curtiss-Wright. "We have taken a leadership role in developing the new high performance standards needed to meet emerging defense applications and we are committed to delivering products based on these standards that should provide maximum throughput, compatibility and computing power."

General Dynamics and Rockwell Collins provide the computer processing, networking, information assurance and data storage resources necessary to support the network-centric operations of FCS.

The GESM contract will be fulfilled by the Curtiss-Wright Motion Control segment facility in Ottawa, Canada and shipped to Rockwell Collins. Curtiss-Wright will supply the General Dynamics/Rockwell team with a rugged VPX-based line replaceable module, called the VPX3-683. VPX3-683 technology supports "in-the-field" servicing, enabling the replacement of individual cards rather than entire card-filled subsystems, thus reducing cost, complexity and logistics. The company's GESM design utilizes commercial-off-the-shelf (COTS) products, which eliminates custom design and support costs and provides cost-effective, readily available, technically-current and future-tolerant core functionality for the FCS system.

The award also includes a services contract to be provided by Curtiss-Wright with a production phase option planned to start in 2010.

About Curtiss-Wright

Curtiss-Wright Corporation is a diversified company headquartered in Roseland, N.J. The company designs, manufactures and overhauls products for motion control and flow control applications, and provides a variety of specialized metal treatment services. The firm employs approximately 7,600 people worldwide. More information on Curtiss-Wright can be found at http://www.curtisswright.com.

About Curtiss-Wright Controls, Inc.

Headquartered in Charlotte, North Carolina, Curtiss-Wright Controls is the Motion Control segment of Curtiss-Wright Corporation. With manufacturing facilities around the world, Curtiss-Wright Controls is a leading technology-based organization providing niche motion control products, subsystems and services internationally for the aerospace and defense markets.
