

## VX500 for Express Prototyping

### Release Date:

Saturday, October 6, 2012 8:08 am EDT

### Terms:

Company News

### Dateline City:

FRIEDBERG, Germany

It's all in the name for Express Prototyping LLC in Keego Harbor near Detroit. The company aims to deliver **plastic models for investment casting within two working days**, and has therefore invested in a voxeljet 3D printing system.

It is anything but a coincidence that **Express Prototyping in the US** relies on a voxeljet VX500 3D printer for the on-demand production of PMMA models. Thomas Müller, CEO of the newly formed company, is a proven RP expert with a lot of experience in **3D printing**, who made a conscious decision in favour of the VX500. "This machine is ideal for our application purposes. It is very precise, fast, reliable and efficient. I think that voxeljet's technology will have a stellar future here in the US, and I am pleased to be participating in this development," says Thomas Müller.

Production with the new machine started not long after the VX500 unit was delivered in July. In this context, the services offered by Express Prototyping go beyond the mere **3D printing** of investment casting models. Complete investment cast parts can also be delivered at the customer's request.
