

AbCellera Corporate Overview

May 2025

DISCLAIMER

This presentation contains forward-looking statements, including statements made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. The forward-looking statements are based on management's beliefs and assumptions and on information currently available to management. All statements contained in this presentation other than statements of historical fact are forward-looking statements, including statements regarding our ability to develop, commercialize and achieve market acceptance of our current and planned products and services, our research and development efforts, and other matters regarding our business strategies, use of capital, results of operations and financial position, and plans and objectives for future operations. In some cases, you can identify forward-looking statements by the words "may," "will," "could," "would," "should," "expect," "intend," "plan," "anticipate," "believe," "estimate," "predict," "project," "potential," "continue," "ongoing" or the negative of these terms or other comparable terminology, although not all forward-looking statements contain these words.

These statements involve risks, uncertainties and other factors that may cause actual results, levels of activity, performance, or achievements to be materially different from the information expressed or implied by these forward-looking statements. These risks, uncertainties and other factors are described under "Risk Factors," "Management's Discussion and Analysis of Financial Condition and Results of Operations" and elsewhere in the documents we file with the Securities and Exchange Commission from time to time. We caution you that forward-looking statements are based on a combination of facts and factors currently known by us and our projections of the future, about which we cannot be certain. As a result, the forward-looking statements may not prove to be accurate. The forward-looking statements in this presentation represent our views as of the date hereof. We undertake no obligation to update any forward-looking statements for any reason, except as required by law.

AbCellera is an early stage biotech with **integrated capabilities for antibody drug creation.**

Our platform combines computation, engineering, molecular design, and biology to support the discovery, development, and clinical manufacturing of **differentiated antibody therapies**, from **target to the clinic**.

STRATEGY

Use our competitive advantage in antibody drug creation to build a pipeline of **differentiated assets**.

Build a competitive advantage

Investments in technological capability can **improve the productivity of drug development**.

So you can solve hard problems

Long-term value creation comes from being able to repeatedly deliver **first-in-class and best-in-class medicines**.

Our engine was built through 10 years of drug discovery partnerships.

Since 2014, we have partnered with some of the industry's most innovative pharma and biotech companies. Partnerships were a driver for R&D, and provided near-term revenue in the form of research payments and long-term potential revenue in the form of royalty stakes in those drug programs.

In 2023, we shifted our focus from partnerships to advancing a pipeline of internal and co-developed programs.

Prelude
THERAPEUTICS

*As of December 31, 2024

Initiation of Phase I clinical trials for **ABCL635 & ABCL575** anticipated in **Q3 2025**.

MOLECULE	TARGET	THERAPEUTIC AREA	STAGE		
ABCL635	NK3R	Endocrinology & Women's Health	CTA* Submission 2025 Q2	Phase I Initiation 2025 Q3 <i>Anticipated</i>	Phase I Readout 2026 <i>Anticipated</i>
ABCL575	OX40L	Immunology & Inflammation	CTA* Submission 2025 Q2	Phase I Initiation 2025 Q3 <i>Anticipated</i>	Phase I Readout 2026 <i>Anticipated</i>

20+ discovery programs in the pipeline

* Clinical Trial Applications (CTAs) = Canadian equivalent to an Investigational New Drug (IND) submission

Enter the clinic and initiate activities at clinical manufacturing facility.

ABCL635 Phase 1 clinical trials initiated in 2025

ABCL575 Phase 1 clinical trials initiated in 2025

Nominate additional development candidate(s) for CTA-enabling studies

Complete platform investments by the first half of the year

Initiate activities at the new clinical manufacturing facility

~\$810M
in available liquidity to execute on our strategy

* Clinical Trial Applications (CTAs) = Canadian equivalent to an Investigational New Drug (IND) submission

POTENTIAL MILESTONES

We expect a number of key milestones in the next **18-24 months**.

First **2 programs** start clinical trials in Q3 **2025**

Anticipate initiation of Phase 1 clinical trials for:

- ABCL635
- ABCL575

First **2 clinical data readouts** in **2026**

Anticipate readout of Phase 1 clinical data:

- ABCL635
- ABCL575

Intention to submit **1-3 INDs** per year

20+ internal programs in discovery: approximately half target complex membrane proteins.

* Clinical Trial Applications (CTAs) = Canadian equivalent to an Investigational New Drug (IND) submission

Internal Programs

We are unlocking high-value drug targets.

GPCR & Ion Channel Platform

- **Clinically validated**, membrane-protein targets with **large commercial potential** that have proven largely intractable using traditional methods for antibody discovery.
- Many high-value targets for large unmet medical need in **immunology, pain, endocrinology, fibrosis and more**.

T-Cell Engager Platform

- Platform to create bispecific antibodies therapies with the potential for **improved specificity and safety**.
- Large, **untapped market opportunity** in solid tumors and autoimmunity.

100% human health n = 27

27 AbCellera-Initiated Programs*
started across these therapeutic areas

*As of December 31, 2024

Internal Programs ABCL635

ABCL635 is a **potential first-in-class** antibody for the **non-hormonal treatment of vasomotor symptoms** (hot flashes).

Target

Neurokinin 3 receptor (NK3R)

Target Type

G protein-coupled receptor (GPCR)

Indication

**Moderate-to-severe vasomotor symptoms (VMS)
associated with menopause**

Therapeutic Area

Endocrinology / women's health

ABCL635

NK3R Antagonist

Initiation of Phase I clinical study
anticipated in **Q3 2025**

Science

- **NK3R is a GPCR** involved in endocrine homeostasis and thermoregulation
- Pathway is **clinically validated** with small molecules
- Primary scientific risk is in achieving sufficient **target engagement**

Commercial Opportunity

- Approximately **40 million women** are of menopausal age in the US¹ and **~30% experience moderate-to-severe VMS²**
- **Novel non-hormonal treatments** for VMS are estimated to become a **\$2B+ market opportunity**

Differentiation

- **Potential first-in-class antibody** therapy
- **Anticipate differentiated safety profile**
- Expected **monthly** (Q4W) subcutaneous **dosing schedule, preferred by women with VMS**

Development Path

- **Well-established clinical development path**
- **Biomarkers** enable assessment of **target engagement in Phase 1**
- **Safety and early efficacy data readouts in 2026**

VMS are highly prevalent, significantly impact health and well-being, and are the **most common reason for seeking treatment** for menopause.

VMS are a significant burden

VMS are the **most common symptoms** of menopause, persisting for a median of 7.4 years.¹

They have a significant impact on quality of life, are associated with cardiovascular disease risk,² and result in lost productivity, career advancement, and income.^{3,4,5}

Millions of women seek treatment

Approximately **40 million women** are of menopausal age in the US.⁶

~30% of women experience moderate-to-severe VMS,⁷ and it is estimated that **more than half** seek treatment for menopausal symptoms.⁸

Despite effective treatments, there remains a **large unmet need for many women suffering from VMS.**

Menopause Hormone Therapy (MHT) is an **effective treatment** for VMS, and the current standard of care.

However, there are many women who are **contraindicated**, have **complications**, or who **choose not to take MHT**.

~12% of women are contraindicated.¹

Presently there are contraindications to MHT for estrogen-dependent cancers and cardiovascular disease.²

~8% of women discontinue MHT within 12 months.^{1 †}

In a global study, **57% of women were eligible for MHT, but against using it.**¹

† AbCellera estimate.

NK3R antagonists are effective non-hormonal options for VMS.

Pre-Menopause

Hypothalamus

NK3R antagonists are effective, non-hormonal options for VMS.

Menopause

NK3R antagonists are effective, non-hormonal options for VMS.

Treatment

Approved and soon-to-be-approved NK3R therapies will establish the market.

Fezolinetant (Veoza[®]) by Astellas

Small molecule NK3R antagonist

Stage

Approved by US FDA on May 12, 2023

Dosing

Daily oral treatment

Safe and effective in reducing severity and frequency of VMS

Elinzanetant by Bayer

Small molecule NK3R and NK1R antagonist

Stage

NDA accepted by US FDA October 9, 2024

Dosing

Daily oral treatment

Safe and effective in reducing severity and frequency of VMS

ABCL635 is designed to offer an **improved treatment option** for women with moderate-to-severe VMS due to menopause.

An **antibody-based therapeutic** may provide several benefits over current non-hormonal treatments:

Potential for reduced toxicities & side-effects

Antibodies are generally not associated with **drug-related liver toxicity**.¹

ABCL635 does not antagonize NK1R, and is therefore not expected to induce **fatigue or somnolence**.^{2, 3, 4, 5}

Dosing flexibility

Over 50% of women with VMS would prefer an **injectable every 4 weeks over a daily oral treatment**.⁶

Increasing use of GLP-1 agonists is significantly increasing the **autoinjector-experienced population**.

6. AbCellera. Sponsored primary market research, 2024. Survey question: If you were presented with two products that were equally efficacious and safe, with similar side effect profiles, which of the following would you prefer to take?

Internal Programs ABCL575

ABCL575 is a potential best-in-class antibody for the treatment atopic dermatitis.

Target

OX40 Ligand (OX40L)

Indication

Atopic Dermatitis (AD)

Therapeutic Area

Immunology & Inflammation

ABCL575

OX40L Antagonist

Initiation of Phase I clinical study
anticipated in **Q3 2025**

Science

- **OX40L mechanism of action established** in atopic dermatitis with a favourable safety profile
- **High potential across multiple immunology and inflammation (I&I) indications** (asthma, alopecia, HS, celiac etc.)
- Attractive pathway for **development of combinations in I&I**

Commercial Opportunity

- **Atopic dermatitis is an \$11B+* market**, growing at over 25%
- **Need for alternatives beyond IL-13 and IL-4/13 classes in both 1st line and 2nd line** (more than 20%** of dupilumab patients discontinue)
- **Potential of OX40L class across multiple indications** is being evaluated

Differentiation

- **Competitive space with two late stage programs** targeting OX40L (amlitelimab) and OX40 (rocatalimab)
- **ABCL575 expected to support Q12W or longer dosing schedule**

Development Path

- **Well-established clinical development path**
- **Safety and PK readouts in 2026**

* Cantor Fitzgerald Estimate, September, 2024

** Spekhorst et al. JAMA Dermatol. 2022; 158(9): 1048

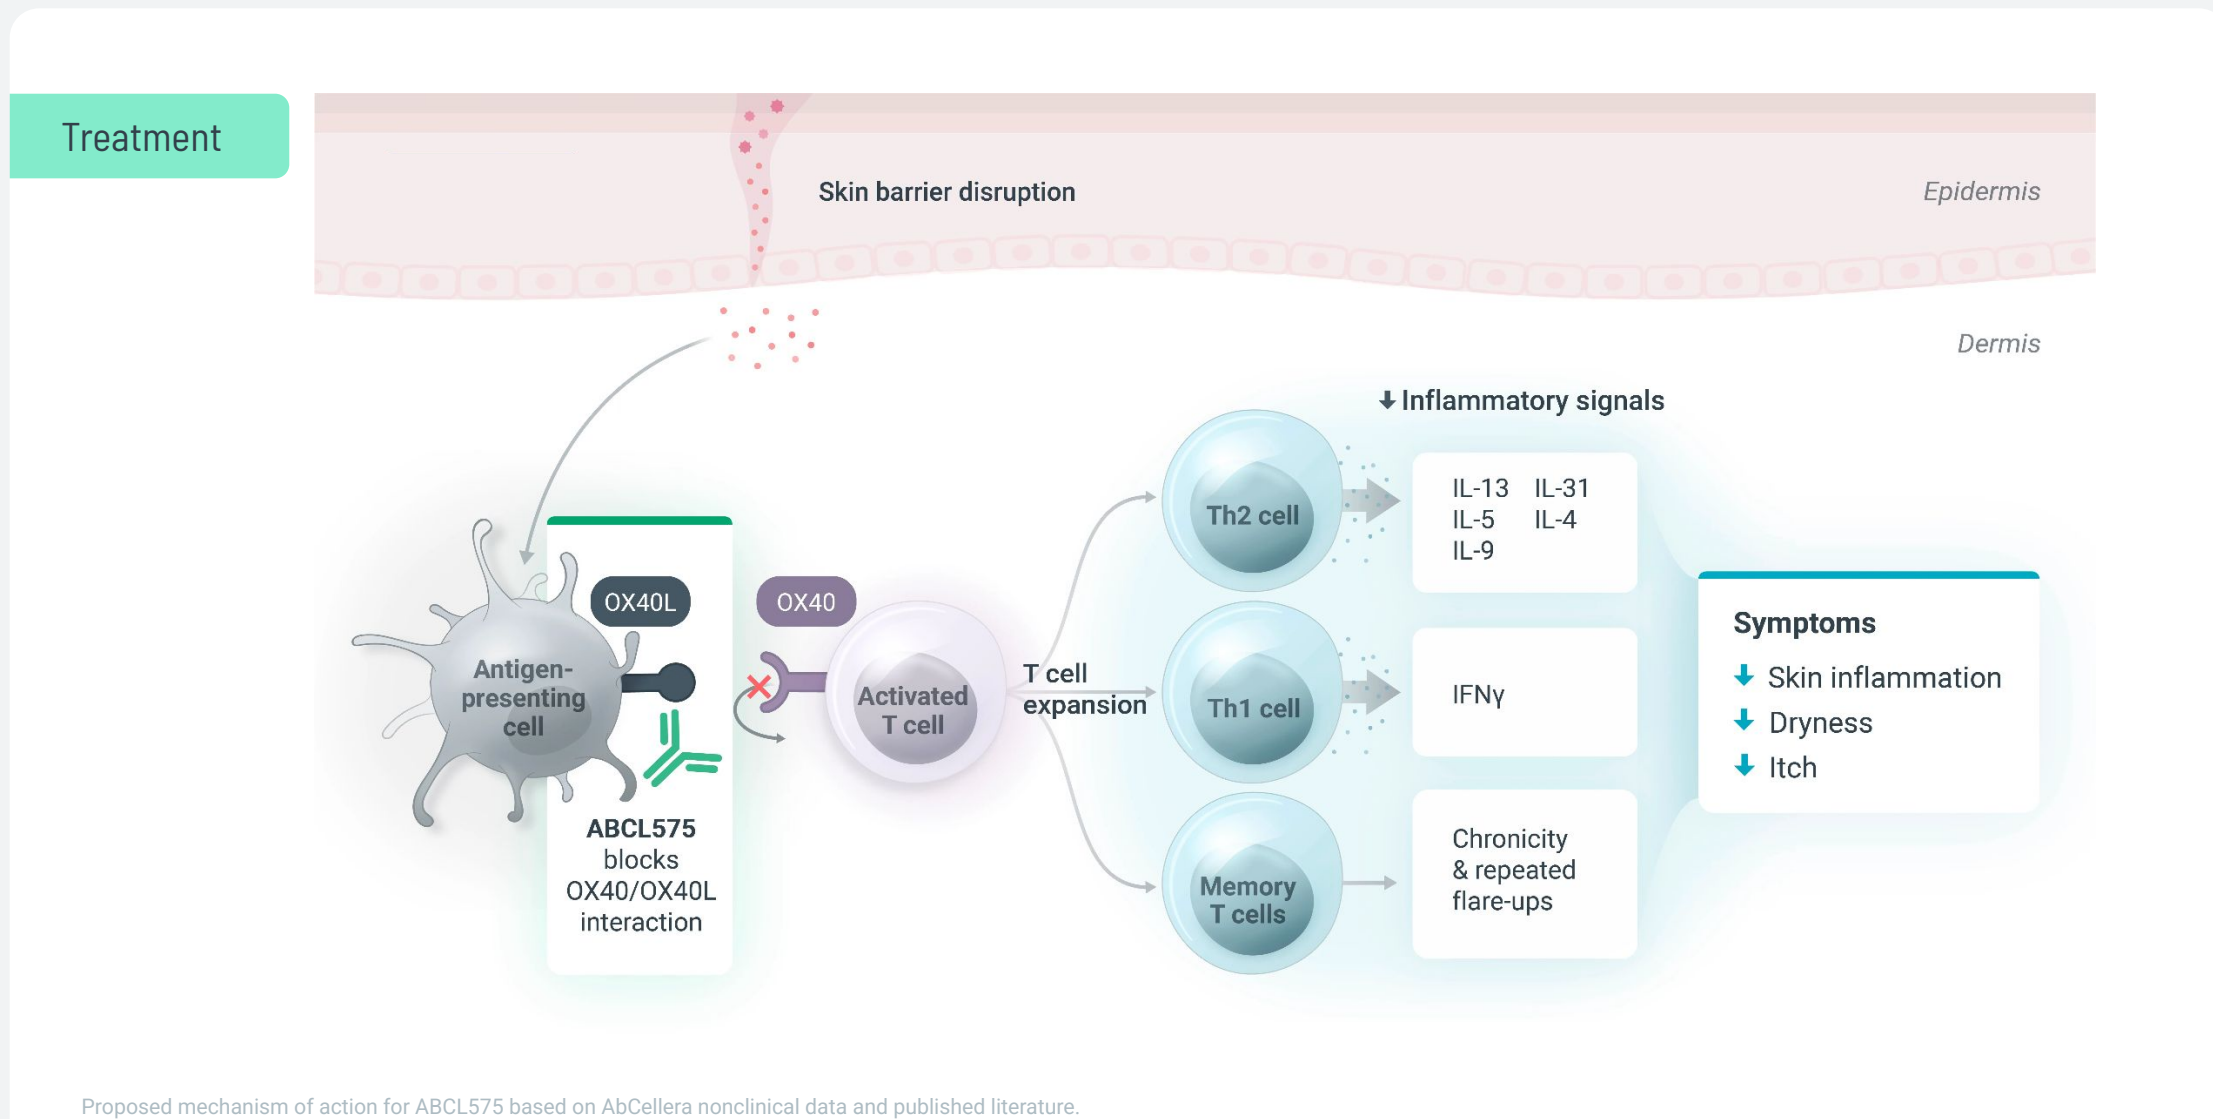

ABCL575 targets multiple immune pathways.

Atopic Dermatitis

ABCL575 targets multiple immune pathways.

Royalty Portfolio & Partnered Programs

OUR PARTNER PORTFOLIO

We built **industry-leading** capabilities through partnerships with the **top-tier** of biotech and pharma partners.

- Validated on **100+ therapeutic programs** over the past 10+ years
- Leading capabilities on **difficult targets and bispecifics**
- A portfolio of **passive royalty positions** in therapeutic programs

91% human health: target antigen known n = 87

96 Partner-Initiated Programs with Downstream Participation*
started are diversified across these therapeutic areas

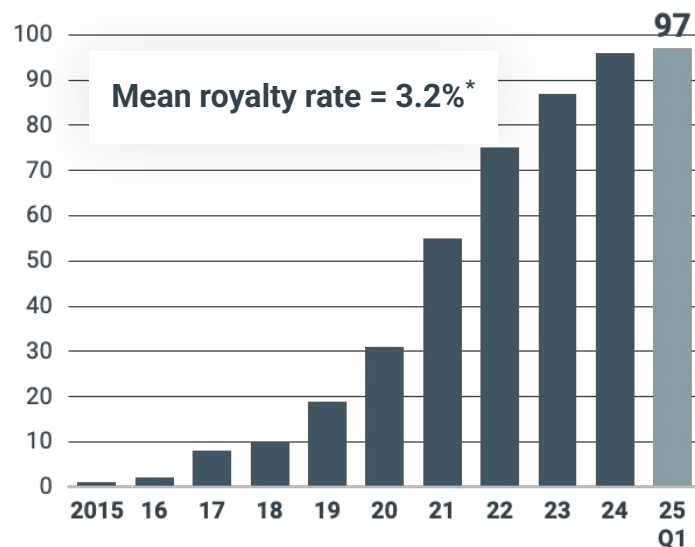

*As of December 31, 2024

Partnerships have built a large **portfolio of royalties** in future antibody medicines.

The value of this portfolio will mature over time as our partners advance these programs into the clinic and beyond.

Cumulative # of
**PARTNER-INITIATED PROGRAM STARTS
WITH DOWNSTREAMS**

Cumulative # of
MOLECULES IN THE CLINIC

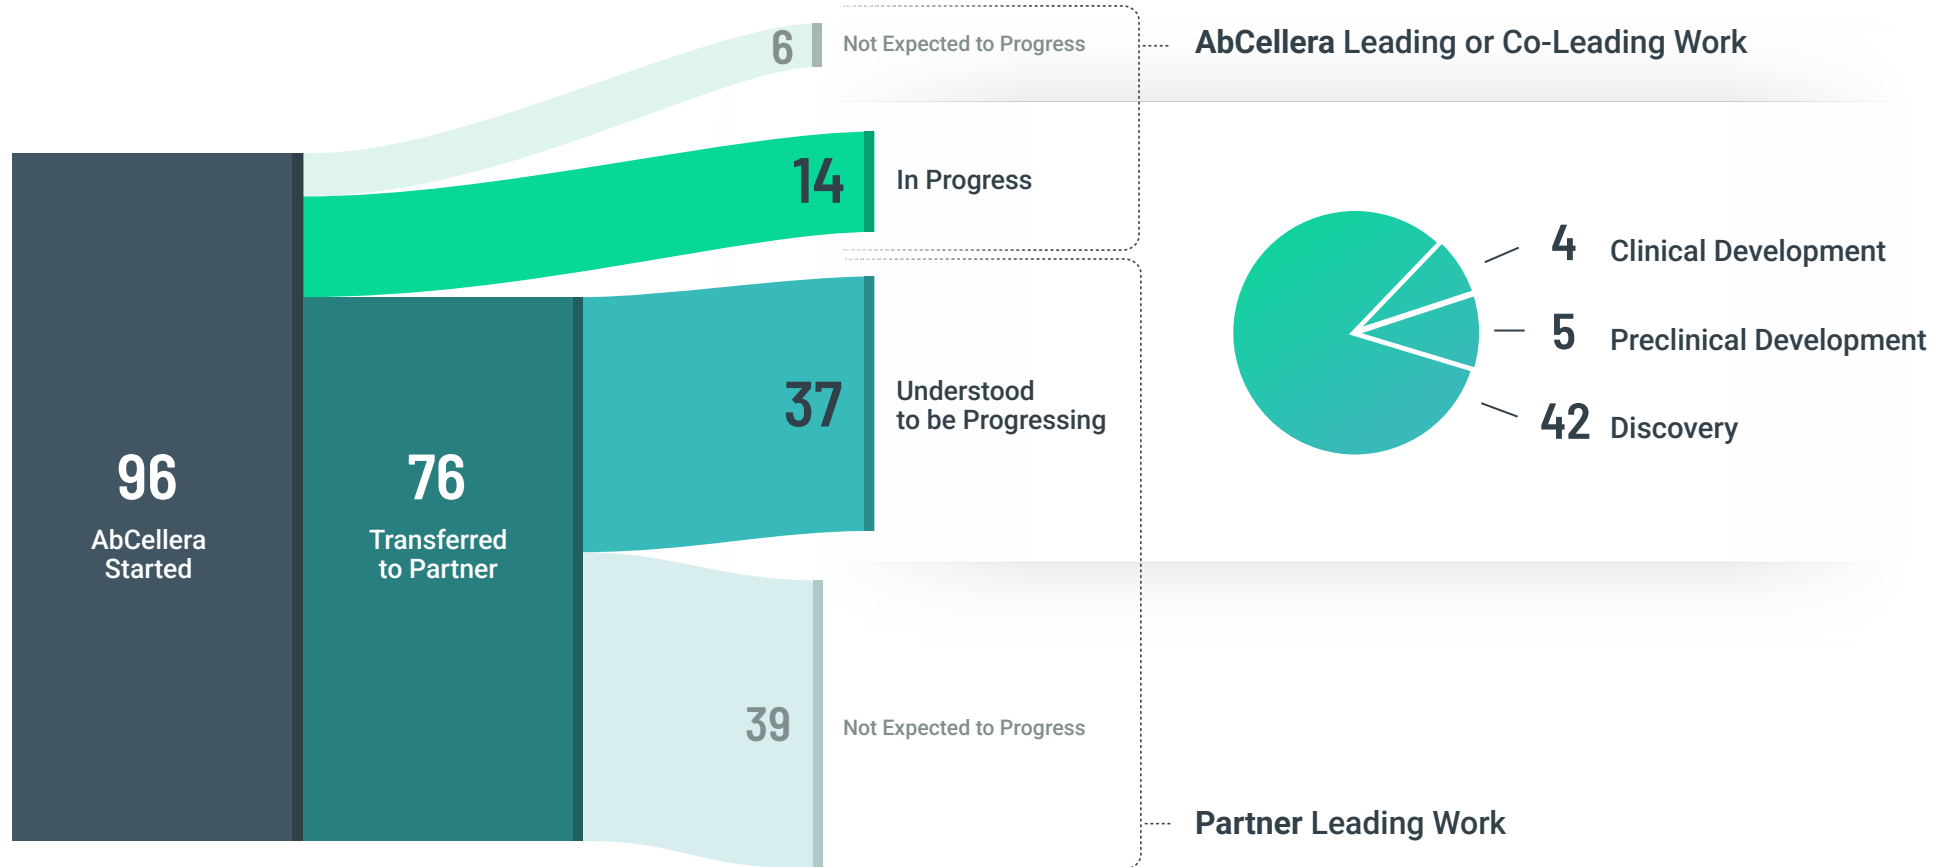

* For programs started by March 31, 2025

Partner-initiated programs continue to progress towards the clinic.

Cumulative # of **PARTNER-INITIATED PROGRAMS WITH DOWNSTREAM PARTICIPATION***

*Excludes AbCellera-initiated and Trianni-license program. As of December 31, 2024. Historical results are not necessarily indicative of future results.

*As of December 31, 2024

A cumulative total of 16 molecules have reached the clinic.

MOLECULE	MOST ADVANCED STAGE	THERAPEUTIC AREA(S)	PARTNER	PROGRAM TYPE
