Supervielle loan performance

A cautious approach in recessionary environment along with weak market demand resulted in lower loan portfolio growth

- > Exposure in Consumer Finance Segment at 8% - down 100 bps from 1Q19 and 300 bps from 2Q18 reflecting tightening of credit scoring standards in prior quarters
- > Share of Corporate Banking loans flat reflecting the decrease in US\$ corporate loans in line with risk appetite in this segment that was offset by the increase in AR\$ loans

1) Denotes loans and leases before allowances

- > Loans to assets ratio declined 50 bps QoQ to 49.4% reflecting higher holdings of Central Bank securities
- > Fx deposits to total deposits decreased 30 bps to 32.4%, mainly due to the appreciation of peso.

Funding & deposit base

Reduced exposure to wholesale & institutional deposit sequentially given lower spreads at quarter end. Expanding share of retail & senior citizens deposits QoQ to 46% from 42%

DEPOSITS BREAKDOWN, June 2019

Net Financial Income (NFI) & NIM

NFI & NIM up 19.8% and 300bps QoQ, respectively due to higher average Leliq yields supported by continuing repricing on retail loans and lower share of non-remunerated reserve requirements

- Net Financial Income up 19.8% QoQ reflecting increases in average asset and deposit volumes and higher interest market rates
 - Interest on loans continued to benefit from additional repricing in personal loans
 - Lower share of non-remunerated reserve requirements
- NIM of 22.1%, up 470 bps YoY and 300 bps QoQ. YoY mainly explained by higher volumes invested in high-yield Central Bank 7-days LELIQS. QoQ reflects higher average spreads, a lower share of non-remunerated reserve requirements, supported by the continuing repricing on loans to individuals.

¹ NII: Net Interest Income, NIFFI: Net income from financial instruments at fair value through profit or loss.

Service fee income & income from insurance activities

Net service fee income stable QoQ as soft loan origination and higher commissions paid, partially offset repricing on bundled services and non-credit related insurance

Net Service Fee Income up 1.1% QoQ reflecting:

- > 6.7% increase in fee income from full impact of the repricing on bundled financial services in the quarter, credit cards commissions and in non-credit related insurance
- > partially offset by a 26.9% increase in debit and credit card commissions paid

Income from insurance activities increased 6.5%. QoQ Gross written premiums increased 15% while claims paid decreased 61%. This reflects the annual rebalancing of the company seasonal accident rates curve (IBNR).

1) Excludes income from insurance activities

* Net services fee income + Income from insurance activities divided by the sum of Net interest income + Net income from financial instruments at fair value through profit or loss + Exchange rate differences on gold and foreign currency, net services fee income, income from insurance activities and other net operating income.

*Efficiency: Personnel, Administrative expenses and Depreciation & Amortization divided by the sum of Net interest income + Net income from financial instruments at fair value through profit or loss + Exchange rate differences on gold and foreign currency, net services fee income, income from insurance activities and other net operating income.

- > 2Q19 Efficiency ratio of 62.4% in 2Q19 improved 390 bps YoY, but increased 340 bps QoQ. Sequential performance reflects AR\$ 273 million in non-recurring severance charges at the bank. Excluding this charges, Efficiency ratio would have been 58.7% which compares with a 57.6% in 1Q19, also adjusted by non-recurring severance costs.
- > Personnel expenses up 24% QoQ, mainly due to salary increases applied in 2Q19 and severance charges, while headcount continued to decline

Profitability

Pre-tax profit up 109% QoQ despite challenging macro and weak loan demand, one-time severance charges from bank reorganization and higher NPL Coverage

— If inflation adjustment in income tax provision would have been considered as of March 31, 2019, the impact would have been Ps. 331 million and Ps. 333 million in 2Q19 and 1Q19, respectively, attributable net income would have been Ps. 1.6 Bn and Ps. 923 million in 2Q19 and 1Q19, respectively, and ROE would have been 34.6% and 21.1% in 2Q19 and 1Q19, respectively. Managerial Restatement.

* ROAE and ROAA were restated and now are calculated taking into account Attributable Net Income divided by Avg. Shareholders' Equity, without excluding the impact from Other Comprehensive Income in Shareholders' Equity. This is in line with the change introduced in the Company's FY19 guidance which now includes Net income instead of Comprehensive Income.

Capitalization

Common Equity Tier 1 Ratio (Consolidated Proforma) of 11.9% in 2Q19, 10 bps above comparable Tier 1 Ratio of 11.8% in 1Q19

CAPITAL DEPLOYMENT [Tier I ratio %] ⁽¹⁾

- > During 2Q19 the Central Bank clarified an interpretation regarding deductions on Tier1 Capital related to deferred tax, asking not to offset deferred tax assets and liabilities even when offsetting is required by IFRS (IAS 12) and Basel framework, hence increasing the deductions on Tier 1 Capital. If this criteria would have been adopted in 1Q19, Common Equity Tier 1 Ratio (Consolidated Proforma) would have been 11.8%.
- > SUPV dividend payment of AR\$303 million in May 19. Dividends received from subsidiaries: AR\$353 million.
- > Capital contribution to CCF of AR\$ 500 million in June 19 .

* Deferred tax on loan loss provisions and losses on Consumer Finance

Supervielle 2019 guidance

While 1H19 net income is tracking ahead of full-year outlook, guidance is placed under revision given heightened volatility and uncertainty

It is more challenging to calibrate guidance around many of the key business drivers for the back half of the year. Impacted by:

- Added uncertainty from heightened volatility due to Presidential election which has resulted in further depreciation of the AR\$
- Upside potential from high monetary policy interest rate supporting high margins
- Remain cautious given downside risk on credit quality from persistently high interest rates and weak activity levels across several sectors

The Company expects to provide an updated guidance to the investment community at such time when the volatility recedes

Capital & Liquidity

CAPITALIZATION

*Under IFRS

** During 2Q19 the Central Bank clarified an interpretation regarding deductions on Tier1 Capital related to deferred tax, asking not to offset deferred tax assets and liabilities even when offsetting is required by IFRS (IAS 12) and Basel framework, hence increasing the deductions on Tier 1 Capital. If this criteria would have been adopted in 1Q19, Common Equity Tier 1 Ratio (Consolidated Proforma) would have been 11.8% instead of 12.1%
