

Domo Launches the COVID-19 Crisis Command Center for the State of Nebraska

April 21, 2020

Ready-to-deploy apps and solutions help power a swift data-driven response to the COVID-19 pandemic; Nebraska, Iowa and Utah are now up and running

SILICON SLOPES, Utah, April 21, 2020 (GLOBE NEWSWIRE) -- [Domo](#) (Nasdaq: Domo) announced today that the State of Nebraska has deployed Domo's [COVID-19 Crisis Command Center](#). The COVID-19 Crisis Command Center is a robust data-driven solution designed to help the State of Nebraska initiate a coordinated, swift response to the COVID-19 pandemic.

The COVID-19 Crisis Command Center, initially built and deployed in 72 hours for the State of Utah, and deployed by the State of Iowa, uniquely delivers BI leverage at cloud scale in record time to get state and local governments on a faster path to recovery. Nebraska is the third state to get up and running with the COVID-19 Crisis Command Center.

"Partnering with Domo has enabled us to rapidly deploy another aggressive program in the fight against COVID-19," said Governor Ricketts. "We're implementing Domo's COVID-19 Crisis Command Center to help coordinate the private and public entities working together to slow the spread of the virus. This expanded testing will give us a more accurate and unified view of what is happening across our state that will help us keep people healthy and restore growth to our economy more quickly."

Through the [COVID-19 Crisis Command Center](#) critical data such as testing capacity and processing times, infections, transmission and recovery data, current hot spots for active cases, as well as entry tracking into the region, are all integrated into one view and available on any device, to help all stakeholders understand, collaborate and take action on key findings.

In addition, specific Domo applications for crisis management, including a Governor's app, a hospital bed utilization app, and a PPE inventory management app, ensure key stakeholders always have up-to-date information at their fingertips, empowering them to make critical decisions anytime, from anywhere.

The Domo COVID-19 Crisis Command Center sits on top of the Domo Business Cloud, making critical insights easily available on mobile devices to those on the front lines and in distributed departments and locations. More than 1,000 data connectors make it easy to bring in new data sources to help inform new decisions as situations change, while robust governance capabilities and administrative tools allow for important data controls.

"Domo is built for times when speed and agility are needed to inform critical decisions and actions at the executive level and at the front lines. With Domo, BI-critical processes that take weeks, months or more can now be done on-the-fly at unbelievable scale. Whether understanding the capacity to meet the demands of state-led testing strategies or ensuring the availability of PPE and medical supplies, the Domo COVID-19 Crisis Command Center, with apps and solutions, gives all stakeholders a holistic view of their specific situation so they have confidence to move swiftly with their response," said Josh James, founder and CEO, Domo.

The COVID-19 Crisis Command Center also includes a Crisis Response Service that includes additional technology and processes to implement widespread and accessible testing, plus first-of-its kind test analysis and tracking, to help stem the spread of the disease.

James added, "Moving quickly is critical in this time and may be the difference between those that make it and those that don't. It's up to everyone to be part of the solution in helping crush the curve and get us all back to work."

As part of its COVID-19 response, Domo also produced a free interactive global COVID-19 tracker to help people and organizations understand the impact of the virus. The latest version of the tracker includes new and improved layouts, plus new data sources such as testing and treatment, hospitalizations, as well as projections and economic impact. It also includes foot traffic data to understand how populations are practicing social distancing. More than 500 Domo customers have connected data from the Domo Covid-19 tracker into their own instances of Domo to help them better understand what's happening and to navigate this environment relative to their specific operations. For more information of the global COVID-19 tracker, which is also accessible on mobile devices, visit [here](#).
