Independent Product Testing Firm Ten Mile Square Technologies Confirms INTRUSION Shield's Cyber Defense Capabilities

8/16/2021

PLANO, Texas, Aug. 16, 2021 (GLOBE NEWSWIRE) -- INTRUSION, Inc. (Nasdaq: INTZ) today announced that INTRUSION Shield was recently tested by independent product & performance assessment consulting firm Ten Mile Square Technologies, with Shield receiving validation of its marketing claims.

Unlike most cybersecurity products, INTRUSION Shield is a signature-free, bidirectional Zero Trust solution that combines historical IP reputation-based threat intelligence with real-time AI and network monitoring to prevent cyberattacks, including Zero-Day and malware-free attacks, before they can harm an organization. It inspects every port, protocol and packet attempting to enter and exit an organization to make pass/kill decisions.

Ten Mile Square Technologies was engaged by INTRUSION to perform an independent assessment of INTRUSION Shield to assess the product's claims as they relate to functionality, performance, and efficacy. From the report, "Ten Mile Square Technologies assessment of the product as compared to the marketing claims finds that the product in fact does deliver on key representations made."

"We found that Shield does what it claims to do, whether it is deployed in 'kill' mode, 'observe' mode or 'turned-off' mode," said Frank Oelschlager, Partner & Managing Director at Ten Mile Square Technologies. "We had a couple of minor suggestions of things they may want to consider doing with Shield, but all-in-all we were very impressed with Shield's alignment with what INTRUSION says it does."

"As a relatively new entrant into the cyber defense market, it is great to see that Shield has been validated by Ten Mile Square, a trusted industry source for testing technology products and providing value-add suggestions to optimize customer satisfaction in the marketplace," said Joe Head, co-Founder and Chief Technology Officer at INTRUSION.
